

## Activity 2.06

Practice Quiz • 10 min • 2 total points

1. If necessary, [start SAS Studio](#) .

1 / 1 point

1. Open a new program editor window and copy and paste this code into the editor:

```
proc import datafile="FILEPATH/storm_damage.tab"
  dbms=tab out=storm_damage_tab;
run;
```

2. In the PROC IMPORT statement, change the path to your **EPG1V2/data** folder. This program imports a tab-delimited file.  
3. Run the program to import the data.  
4. Suppose the original file changes and you want to refresh the SAS table. Run the code again.

Did the import run on the second submission?

- ☐ yes  
☒ no

 **Correct**

A note in the log indicates that the import was cancelled because **work.storm\_damage\_tab** already exists.

2. Fix the program and rerun it to confirm that the import is successful. What did you do to fix the program?

1 / 1 point

- ☒ Added the REPLACE option.  
☐ Changed the name of the table on the OUT= option.

 **Correct**

```
proc import datafile="filepath/storm_damage.tab"
  dbms=tab out=storm_damage_tab replace;
run;
```
