

Activity 2.02

Practice Quiz • 10 min • 1 total point

1. If necessary, [start SAS Studio](#) .

1 / 1 point

1. Expand **Files and Folders** and navigate to the location of your course files. Open the **data** folder.
2. Double-click the **storm_summary** SAS table to view it. Notice that missing character values are stored as a space and missing numeric values are stored as a period.
3. Click the **Table Properties** tool above the **storm_summary** data to view the table and column attributes. Examine the length of the **Basin** column.

Could *East Pacific* be properly stored as a data value in the **Basin** column?

- ☐ Yes
- ☒ No

 **Correct**

The length of the **Basin** column is 2 bytes, so the value would be truncated and only *Ea* would be stored for the value *East Pacific*.
