Level 1 Practice: Filtering Rows in a Listing Report Using Character Data

Practice Quiz. • 20 min. • 1 total point available.1 total point

1. The **pg1.np_summary** table contains public use statistics from the National Park Service. The park type codes are inconsistent for national preserves. Examine these inconsistencies by producing a report that lists any national preserve. If necessary, start SAS Studio ☐ before you begin.

   Reminder: If you restarted your SAS session, you must open and submit the **libname.sas** program created in Activity 2.04.

   1. Open **p103p04.sas** from the **practices** folder.
   2. Add a WHERE statement to print only the rows where **ParkName** includes *Preserve*. **ParkName** contains character values, and these values are case sensitive.
   3. Submit the program and view the results. **Note**: If you use double quotation marks in the WHERE statement, you receive a warning in the log. To eliminate the warning, use single quotation marks.

   Which codes are used for preserves?

   ○ PRESERVE

   ○ PRE

   ○ NPRE

   ◉ all of the above

   ⊘ **Correct**
   Yes, the output shows that PRE, PRESERVE, and NPRE are all used for preserve in the **Type** column.
